Qualtrics is Web-based survey software available for use by all UTEP Faculty, Students and Staff to support teaching and research at UTEP. Surveys can be created and distributed by anyone with a UTEP account.

Anyone on your team can build, send and analyze surveys. Our goal is to make difficult things simple, so you can focus on research rather than software.

Control your logos, branding, text, questions, messages, choices, reports, graphs, images, colors, exports, code, emails, fonts, skins, sharing, panels, logics, blocks, and…well…pretty much anything else you could imagine.

With Qualtrics, you have absolute data freedom. Enjoy direct exports to SPSS, Excel & more. Easily pass results to top CRM’s, like SalesForce. Or, use our API to integrate with virtually any other system you’d like.

Surveys are rarely created by a single person. Collaborate in real-time – across the office, or across the globe. Grant anyone access to surveys and reports. Keep your research consistent and efficient. All without breaking a sweat.

Multi-lingual respondents? No problem. We make it easy to translate your survey into 48 languages, then automatically serve it in a person’s native tongue. Magnifique!

Qualtrics Workshop Objectives

1. How to get a Qualtrics account
2. How to create a survey
3. How to add and edit questions
4. How to distribute your survey

Visit tsc.utep.edu/workshops to see when the next workshop is scheduled.

No software to install. No files to store. Access your surveys and data from any location, any time you need. And thanks to our uber-secure technology, you never have to worry about losing data. Ever.
