Apple and LINUX-Based Host Name Look-Up

To assist the Information Security Office (ISO) in identifying what your system’s Host Name is, please follow the instructions provided below:

Apple-Based System: For either a MAC OS X 10.5 (Leopard), MAC OS X 10.6 (Snow Leopard), or MAC OS X 10.7 (Lion) Based-System,

- choose Apple menu > System Preferences, and then click Sharing. The computer name (aka host name) will appear at the top of the window.

Linux-Based System: For a Linux-based system, please open a terminal and type the following command and the command prompt:

>hostname
