

## Apple and LINUX-Based Information Look-Up

To assist the Information Security Office (ISO) in identifying what your system's Host Name, MAC Address and IP Address are, please follow the instructions provided below:

**Apple-Based System:** For either a Mac OS X 10.5 (Leopard), Mac OS X 10.6 (Snow Leopard), or Mac OS X 10.7 (Lion) Based-System:

- Host Name - choose **Apple menu > System Preferences**, and then click **Sharing**. The computer name (aka host name) will appear at the top of the window.
- IP Address - choose **Apple menu>System Preferences**, and then **Network**. Address should appear here.
- MAC Address-choose **Apple menu > About This Mac**, and then click **More Information ...** - then **Network** (far left side). IP Address will be listed under **Ethernet>MAC Address** .

**Linux-Based System:** For a Linux-based system, please open a terminal and type the following command and the command prompt:

**>hostname**
